

MY VISIT TO THE UNIVERSITY IN HANNOVER

It was early in the morning and me and my friend Luka weren't so happy when our teachers picked up us for a visit to the University of physics.

The university is in the other part of the town and we needed to travel for 45 minutes.

When we came there Mr. Mile Kovachev waited and he took us to one of the classrooms. I remeber that he was a very nice man and he started his lecture about basics of physic. His lecture was intersteing but my friend Luka almost fel asleep and that was very funny. He takled about lasers. After that we went to other classrom and a professor helped us in experiment with the lasers and that was interesting. Me and Luka are bad in physic anda an Italian colleague helped us do all the job, thankfully.

After that Mr. Mile Kovachev took us to the laboraty where we looked for some machines which help to create the lasers. It was a very hard morning for all of us and in the end we decided to go for a lunch. We had a lunch in the canteen where we ate some pancakes with cream and they were very tasty for me and that was the best part of the morning.

In the end it was a good experience but too much physic for me because I don't like it and don't have it in my high school so I don't know a lot about it. Maybe I should start learning it more ☺)
